

Quarantine Color Kit

Gloss Only Instructions

A. In the Box

- Shades EQ gloss bottle with your formula
- Gloss developer bottle
- 4 clips for sectioning and organizing
- Gloves
- A processing cap

B. Prep

1. Wear a junky t-shirt or clip a towel around your shoulders.
2. Divide your hair into 4 sections. Using a clip, and starting at the center of your hairline (or wherever you part), “draw” a straight vertical line back to the nape of your neck. Separate the two halves of your hair. Then, separate those halves from the crown (top middle of the head) to behind each ear creating 4 quarters of your hair. Twist each section and clip them up.
3. Put on your gloves.
4. Pour the gloss color into your gloss developer bottle and gently swirl color to mix.
5. Cut the tip off the squeeze top (leaving only a small opening). Be careful to direct the bottle away from your face as some of the contents might spit out a bit.

C. Application

1. Slightly dampen your hair (with a spray bottle if you have one). The hair should *not* be dripping wet.
2. Starting with one of the front quadrants, lift a one-inch section above the ear, and apply color to the entire piece working the color through until well-saturated.
3. Follow that pattern through each section. You will have enough product to cover all your hair but if you are concerned about supply, be conservative at first, going back over less-saturated areas.

D. Processing

1. Clip all your hair up and put on your processing cap.
2. Your gloss should process for up to 20 minutes.

E. Rinsing

1. Before shampooing, rinse until the water runs clear.
2. Shampoo and condition.

F. Cleanup

1. Use witch hazel, makeup remover, or dish soap to remove any dye that may have stained your skin.
2. If any product has discolored your sink or shower, remove it using either bleach, rubbing alcohol, or acetone.
3. Please reuse or recycle your plastic bottles!
